EDUCATION

National Institute of Applied Science and Technology

Tunis, Tunisia

Software Engineering Degree

Sep. 2022 – Sep. 2027

EXPERIENCE

Lead AI Engineer | *Python, FastAPI, Qdrant, Postgres, Docker, CI/CD* January 2026 – Present

RémAI

Remote – Canada

- **Direct Revenue Impact:** Architected and deployed production AI/WhatsApp chatbots that generated over **\$19,000 USD** in client revenue in 21 days.
- **Zero-to-One Infrastructure:** Rebuilt technical infrastructure from scratch—transitioning legacy setups to automated CI/CD pipelines, system architecture flows, containerized deployments, and production monitoring systems.
- **Client Scale & Growth:** Led client demos and Proof-of-Concepts (PoCs) scaling paying clients from 0 to 4, servicing over **11,400+ active end-users** across client bases (8k, 1.5k, 1k, and 900 users).
- **Incident Response & Reliability:** Managed incident response, site reliability, and production SLAs as Lead Engineer, while guiding development sprints and mentoring interns.
- **Vector Search Optimization:** Implemented Qdrant search to reduce product catalog query latency and support multi-modal search workflows.

AI Engineer | *Python, FastAPI, CustomerIO, Milvus, Postgres* November 2024 – December 2025

Mindbay Technologies

Remote – United Kingdom

- Collaborated on an AI-powered mental health platform, engineering RAG pipelines and optimizing LLM response frameworks.
- Increased Session 1 user conversion rate by over **50%** by optimizing AI responses and notification timing.
- Automated end-to-end testing using an AI-driven testing system, reducing overall testing cycle durations by over **50%**.
- Implemented a personalized AI-powered notification and engagement workflow using Customer.io.

PROJECTS

DrugZello | *Python, TensorFlow, Graph Neural Networks*

Jan. 2025 – Jun. 2025

- Engineered a dual-channel Graph Neural Network (GNN) to forecast molecular solubility across 75 solvents, increasing prediction accuracy by **12%** over baseline regression models.
- Implemented Explainable AI (XAI) to highlight molecular regions influencing solubility and built a visualization toolkit based on recent research.

HACKATHONS & AWARDS

3rd Place – AINS Hackathon

June 2026

Project: Gommage (Agentic AI Observability & Replay Proxy)

- Engineered an infrastructure-layer proxy middleware to solve non-deterministic agentic AI production failures.
- Intercepted LLM and tool calls via Agent Execution Records (AER), enabling zero-side-effect step-by-step execution replay, divergence prompt editing, and embedded Jira panel observability.

Winner – Unbreaking News 2.0 Hackathon

November 2025

Project: Relib (Colonial Bias Analysis Platform)

- Designed and built Relib, an AI platform detecting colonial bias in Wikipedia articles using knowledge graphs, NLP, and cross-lingual semantic analysis.
- Developed bias scoring modules for source provenance, colonial language detection, agency analysis, and actor representation.

CERTIFICATIONS

Machine Learning Specialization

Coursera

Contains 3 courses delving into various aspects of machine learning

Jun. 2024 – Jul. 2024

TECHNICAL SKILLS

Programming Languages: Python, C/C++, SQL (Postgres), JavaScript, HTML/CSS

Frameworks & Tools: FastAPI, React, Flask, NestJS, Symfony, Docker, Git, Milvus, Qdrant, Azure, CI/CD, REST APIs, SCRUM

Specializations: Incident Response, Agentic AI Debugging, RAG Architecture, Multi-Modal Search, Machine Learning, Cybersecurity

Spoken Languages: Arabic (Native), English (Fluent), French (Fluent), German (Beginner)
